

## **Proteus<sup>®</sup> Now Quantify - License Overview**

This is an overview of the used licenses.

MIT: permissive, no copy left

Apache-2.0: permissive, no copy left

BSD-3-Clause: permissive, no copy left

Custom: check individually:

- DotNetEnv (LICENSE):  
Points to a license labelled “The MIT License (MIT)”. Seems to be permissive, and no copy left is required.
- Microsoft.VisualStudio.Azure.Containers.Tools.Targets (EULA.md)  
Terms of use for utilities and build tools. Seems ok, no restrictions for commercial use or requirements for copy left or attribution
- MockQueryable.NSubstitute (LICENSE)  
Points to a license labelled “MIT License”. Seems to be permissive, and no copy left is required.
- Npgsql.EntityFrameworkCore.PostgreSQL (PostgreSQL)  
This seems fine. No restrictions on commercial use or requirements for copy left.
- jszip@3.10.1 (MIT OR GPL-3.0-or-later)  
In the repository it states “JSZip is dual licensed. At your choice you may use it under the MIT license or the GPLv3 license.”. This is ok so we can select to use it under MIT license which is permissive and no copy left is required.
- scichart@3.5.744 (Custom)  
SciChart has proprietary licenses. We should not be using in in our project. I assume this is an older reference that is no longer used.

## Quantify backend dependencies

The list is generated using “dotnet-project-licenses” package.
